| LS23036 | GPS mouse/ MTK3339,3m,RJ11,9600BPS | |

Note: LS23036 is most popular. We recommend customers to use for their new design.

Datasheet of GPS mouse, LS2303x series

1 Introduction

LS2303x series products are complete GPS receivers (also known as GPS mouse) based on the proven technology found in LOCOSYS 66 channel GPS SMD type receivers MC-1513 that use MediaTek chip solution. The GPS mouse will acquire up to 66 satellites at a time while providing fast Time-To-First-Fix, one-second navigation update and low power consumption. It can provide you with superior sensitivity and performance even in urban canyon and dense foliage environment. Its far-reaching capability meets the sensitivity requirements of car navigation as well as other location-based applications.

These products support hybrid ephemeris prediction to achieve faster cold start. One is self-generated ephemeris prediction that is no need of both network assistance and host CPU's intervention. This is valid for up to 3 days and updates automatically from time to time when GPS module is powered on and satellites are available. The other is server-generated ephemeris prediction that gets from an internet server. This is valid for up to 14 days. Both ephemeris predictions are stored in the on-board flash memory and perform a cold start time less than 15 seconds.

2 Features

- MediaTek high sensitivity solution
- Support 66-channel GPS
- Low power consumption
- Fast TTFF at low signal level

- Built-in 12 multi-tone active interference canceller
- Free hybrid ephemeris prediction to achieve faster cold start
- Built-in data logger
- Support AGPS
- Up to 10 Hz update rate
- Capable of SBAS (WAAS, EGNOS, MSAS)
- Support Japan QZSS
- Indoor and outdoor multi-path detection and compensation
- Build-in micro battery to reserve system data for rapid satellite acquisition
- LED indicator for GPS fix or not fix
- Magnet for mounting on the car
- Skid resistant pad on the bottom
- Waterproof

3 Application

- Personal positioning and navigation
- Automotive navigation
- Marine navigation

5.3 Examples to configure the power mode of GPS module

The GPS module supports different power modes that user can configure by issuing software commands.

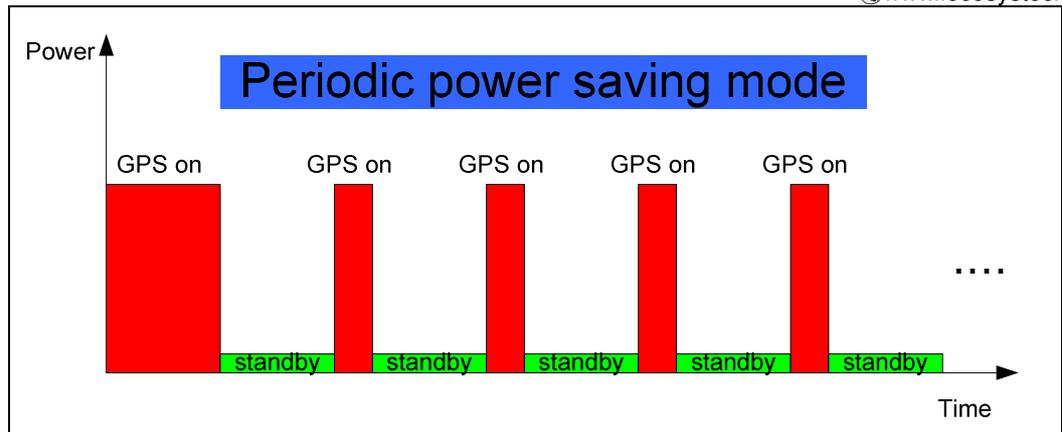

5.3.1 Standby mode

User can issue software command to make GPS module go into standby mode that consumes less than 200uA current. GPS module will be awaked when receiving any byte. The following flow chart is an example to make GPS module go into standby mode and then wake up.

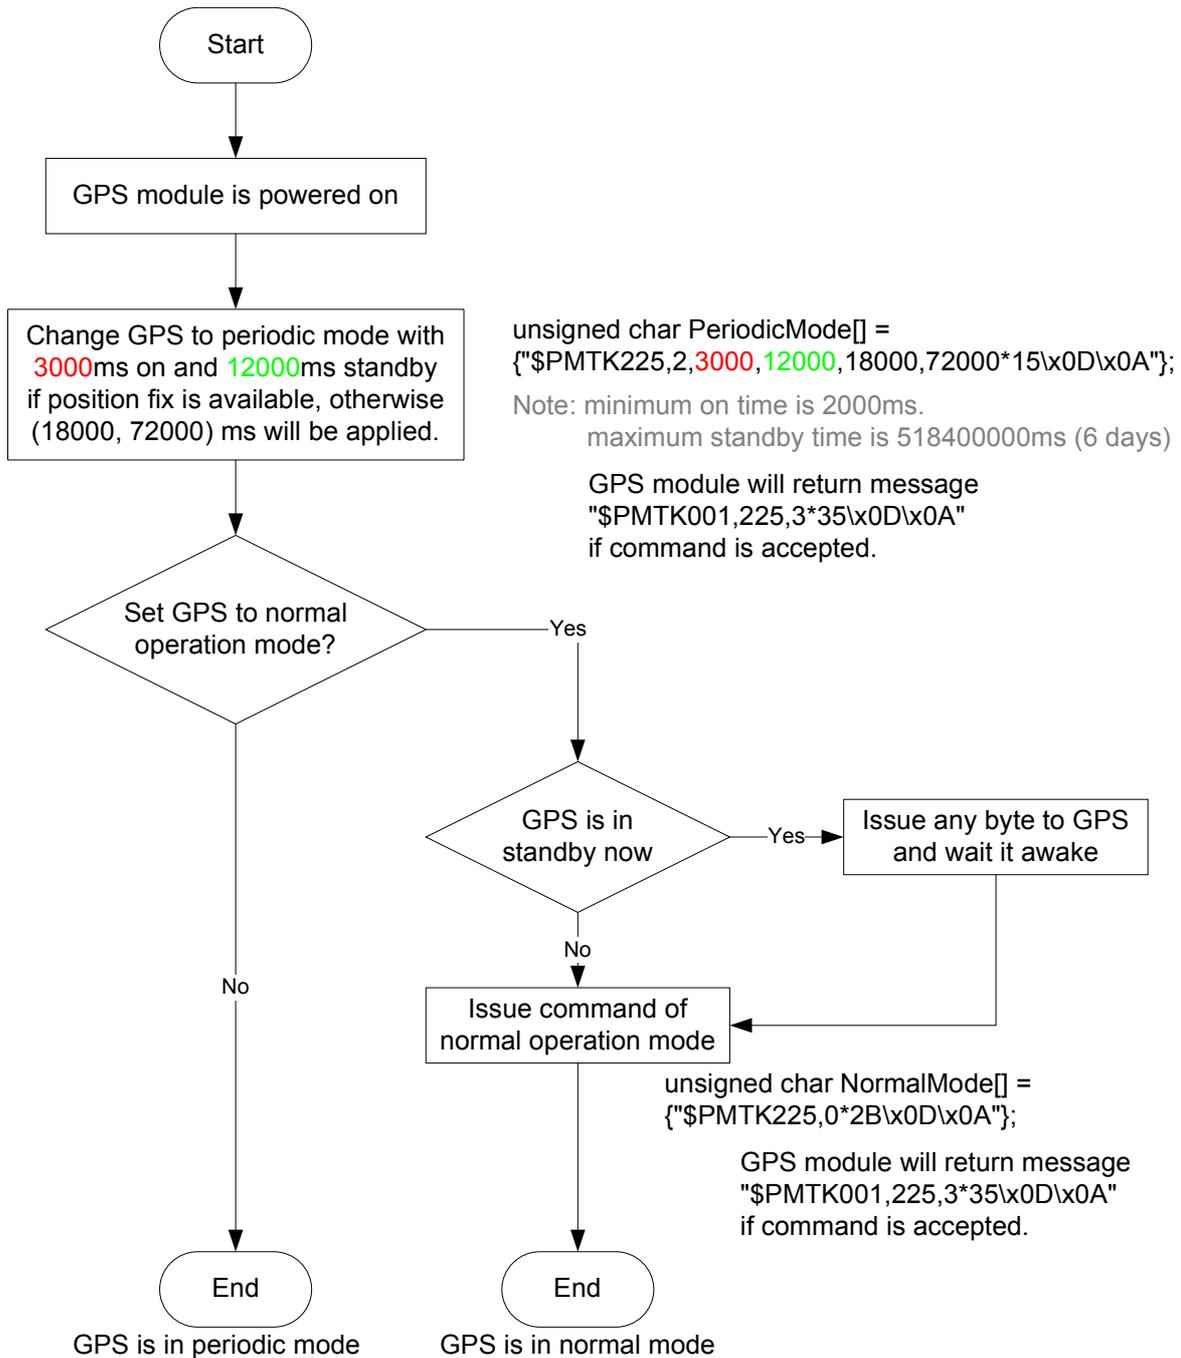

5.3.2 Periodic mode

When GPS module is commanded to periodic mode, it will be in operation and standby periodically. Its status of power consumption is as below chart.

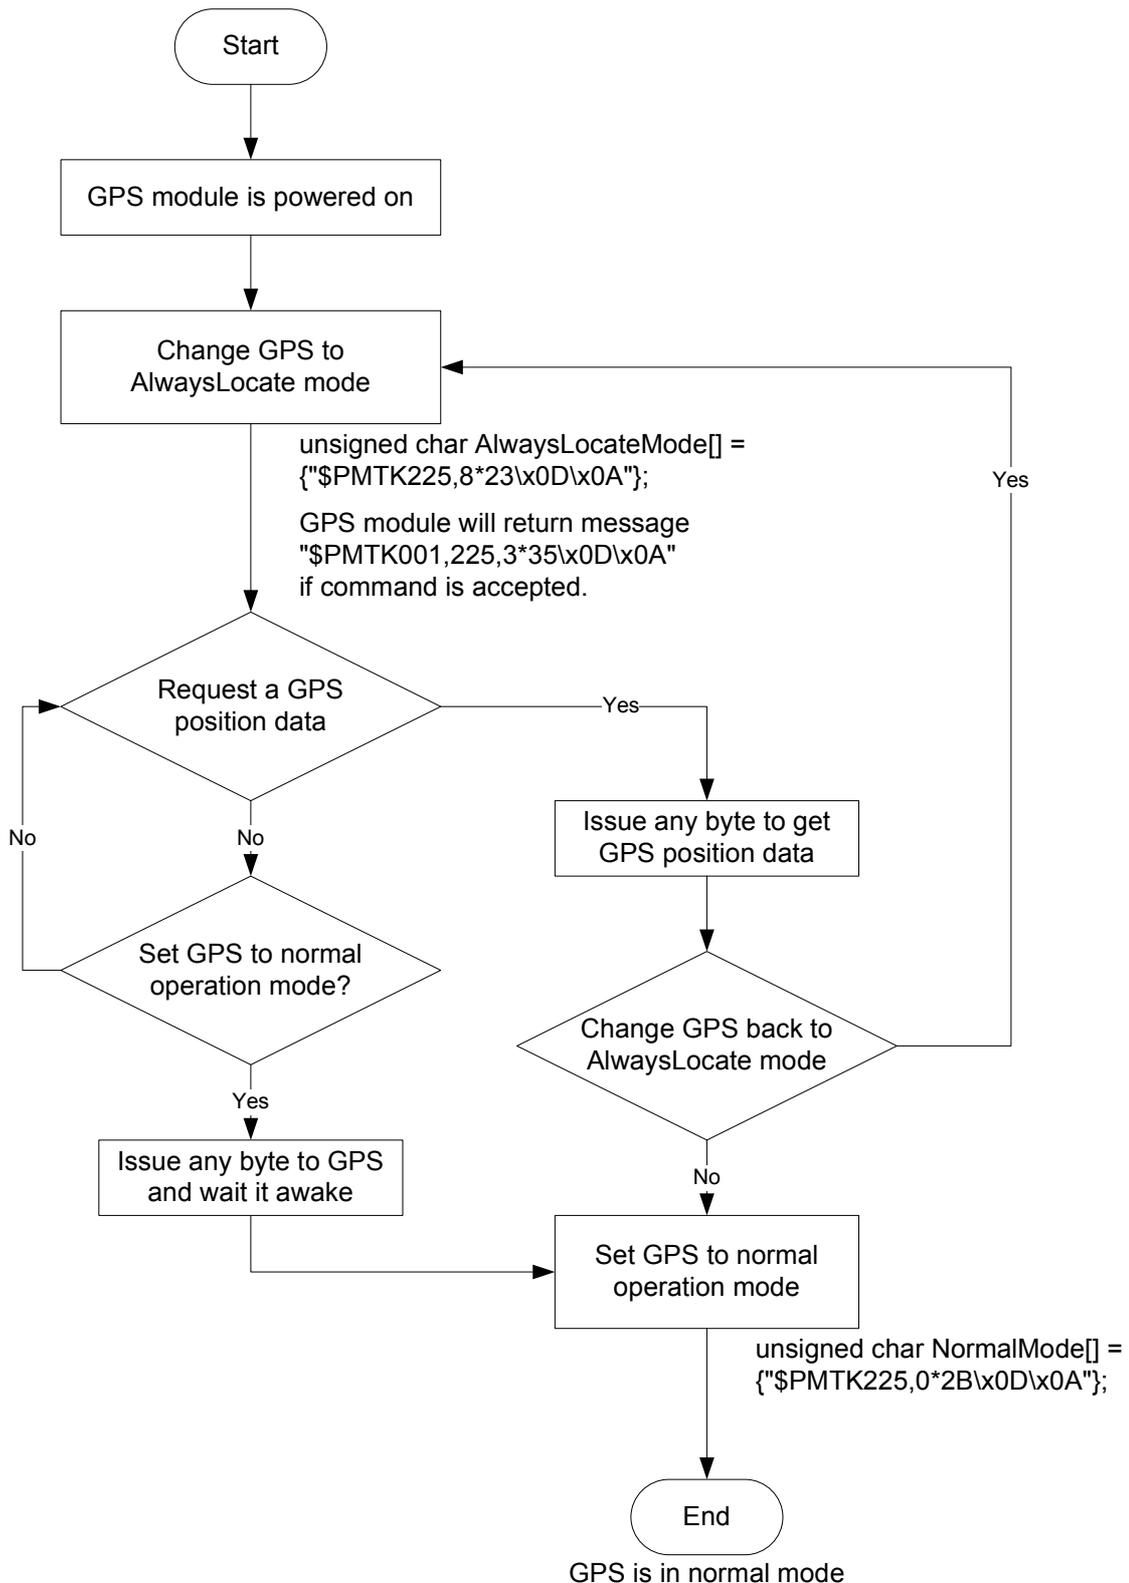

The following flow chart is an example to make GPS module go into periodic mode and then back to normal operation mode.

5.3.3 AlwaysLocate™ mode

AlwaysLocate™ is an intelligent controller of periodic mode. Depending on the environment and motion conditions, GPS module can adaptively adjust working/standby time to achieve balance of positioning accuracy and power consumption. In this mode, the host CPU does not need to control GPS module until the host CPU needs the GPS position data. The following flow chart is an example to make GPS module go into AlwaysLocate™ mode and then back to normal operation mode.

Note: AlwaysLocate™ is a trade mark of MTK.

5.4 Data logger

The GPS module has internal flash memory for logging GPS data. The configurations include time interval, distance, speed, logging mode, and ... etc. For more information, please

contact us.

5.5 Examples to configure the update rate of GPS module

The GPS module supports up to 10Hz update rate that user can configure by issuing software commands. Note that the configurations by software commands are stored in the battery-backed SRAM that is powered through VBACKUP pin. Once it drains out, the default/factory settings will be applied.

Due to the transmitting capacity per second of the current baud rate, GPS module has to be changed to higher baud rate for high update rate of position fix. The user can use the following software commands to change baud rate.

| Baud rate | Software command |
|-----------------|-----------------------------|
| Factory default | \$PMTK251,0*28<CR><LF> |
| 4800 | \$PMTK251,4800*14<CR><LF> |
| 9600 | \$PMTK251,9600*17<CR><LF> |
| 19200 | \$PMTK251,19200*22<CR><LF> |
| 38400 | \$PMTK251,38400*27<CR><LF> |
| 57600 | \$PMTK251,57600*2C<CR><LF> |
| 115200 | \$PMTK251,115200*1F<CR><LF> |

Note: <CR> means Carriage Return, i.e. 0x0D in hexadecimal. <LF> means Line Feed, i.e. 0x0A in hexadecimal.

If the user does not want to change baud rate, you can reduce the output NMEA sentences by the following software commands.

| NMEA sentence | Software command |
|---|--|
| Factory default | \$PMTK314,-1*04<CR><LF> |
| Only GLL at 1Hz | \$PMTK314,1,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only RMC at 1Hz | \$PMTK314,0,1,0,0,0,0,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only VTG at 1Hz | \$PMTK314,0,0,1,0,0,0,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only GGA at 1Hz | \$PMTK314,0,0,0,1,0,0,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only GSA at 1Hz | \$PMTK314,0,0,0,0,1,0,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only GSV at 1Hz | \$PMTK314,0,0,0,0,0,1,0,0,0,0,0,0,0,0,0,0*29<CR><LF> |
| Only ZDA at 1Hz | \$PMTK314,0,0,0,0,0,0,0,0,0,0,0,0,0,0,0,1,0*29<CR><LF> |
| RMC, GGA, GSA at 1Hz and GSV at 0.2Hz | \$PMTK314,0,1,0,1,1,5,0,0,0,0,0,0,0,0,0,0*2C<CR><LF> |
| If the command is correct and executed, GPS module will output message \$PMTK001,314,3*36<CR><LF> | |

After the GPS module is changed to higher baud rate or reduced NMEA sentence, the user can configure it to high update rate of position fix by the following commands.

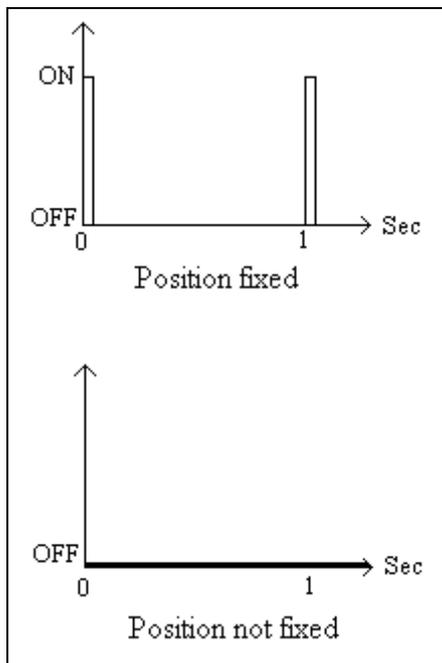

| Interval of position fix | Software command |
|---|---------------------------|
| Every 100ms (10Hz) ⁽¹⁾ | \$PMTK220,100*2F<CR><LF> |
| Every 200ms (5Hz) | \$PMTK220,200*2C<CR><LF> |
| Every 500ms (2Hz) | \$PMTK220,500*2B<CR><LF> |
| Every 1000ms (1Hz) | \$PMTK220,1000*1F<CR><LF> |
| Every 2000ms (0.5Hz) ⁽²⁾ | \$PMTK220,2000*1C<CR><LF> |
| If the command is correct and executed, GPS module will output message \$PMTK001,220,3*30<CR><LF> | |

Note 1: The minimum interval of position fix is 100ms, i.e. the maximum update rate is 10Hz.

Note 2: The current consumption is the same with the update rate of 1Hz.

6 LED indicator

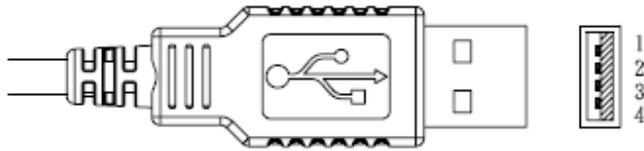

The red LED is an indicator of GPS positioning status. In continuous power mode, it flashes once per second when position is fixed. Otherwise it is off. The timing in detail is as below.

Document change list

Revision 1.0

- First release on Oct. 25, 2007.

Revision 1.0 to Revision 1.1 (July 20, 2009)

- Changed GPS chip from MT3318 to MT3329 on page 2.
- Added “Support AGPS” on page 1.
- Changed channels from 32 to 66 on page 2.
- Changed update rate from “up to 5Hz” to “up to 10Hz” on page 2.
- Changed hot start time from “2s (typical)” to “<2s (typical)” on page 2.
- Changed cold start time from 36s to 35s on page 2.
- Added “Note 1” on page 2.
- Changed typical current of LS23030 from 47mA to 29mA on page 9.
- Changed typical current of LS23032 from 46mA to 34mA on page 9.
- Changed typical current of LS23033 from 46mA to 34mA on page 10.
- Changed typical current of LS23035 from 46mA to 34mA on page 10.
- Changed typical current of LS23036 from 46mA to 34mA on page 10.

Revision 1.1 to Revision 1.2 (February 10, 2012)

- Changed GPS chip from MT3329 to MT3339 on page 2.
- Added the description of hybrid ephemeris prediction in the section 1.
- Added several new features in the section 2.
- Changed hot start time from < 2s to < 1s on page 2.
- Changed cold start time from 35s to 32s on page 2.
- Changed Max. Altitude from 18,000m to 50,000m on page 2.
- Changed the range of satellite ID in GSV message from 32 to 196 on page 5.
- Added “N = data not valid, R=Coarse Position, S=Simulator” in GLL, RMC and VTG message.
- Added section 5.3, 5.4 and 5.5.
- Changed typical current of LS23030 from 29mA to 22mA in the section 8.1.
- Changed typical current of LS23032, LS23033, LS23035 and LS23036 from 34mA to 19mA in the section 8.1.
